

The background is a light blue illustration of a modern classroom or office environment. Several students are depicted, some sitting at desks with laptops that have the TCS logo on them. Other students are standing and holding up blue banners with the TCS logo. The scene is bright and positive, suggesting a successful learning or recruitment process.

TCS Placement Prep 2025–26

Your Gateway to India's Largest IT Employer

Tata Consultancy Services (TCS) continues to be the #1 campus recruiter for B.Tech freshers across India. With ~40,000 trainee hires planned in 2025 and a strategic pivot toward AI-led delivery, this is your moment to prepare smart, prepare early, and land your dream role.

B.TECH 2026 BATCH

CAMPUS PLACEMENT GUIDE

Why TCS?

TCS is not just a company — it's a career launchpad. With a global footprint across 55 countries and a workforce of over 600,000, TCS offers unmatched stability, learning opportunities, and growth for freshers entering the IT industry.

Global Scale

Operations in 55+ countries with Fortune 500 clients across industries — banking, healthcare, retail, and more.

Hiring Momentum

~40,000 trainee hires planned in 2025. ~25,000 campus offers already issued in India this cycle.

AI-First Strategy

TCS is realigning toward an AI-led operating model, creating high-value roles for candidates with modern tech skills.

Competitive Packages

Three role tiers — Ninja (₹3.40 LPA), Digital (₹7.09–7.30 LPA), Prime (₹9.09–9.30 LPA) — rewarding performance.

The Hiring Process

TCS recruitment for 2025–26 is centered on the **Integrated TCS National Qualifier Test (NQT)**, a 190-minute assessment followed by structured interview rounds. Understanding each stage is the first step to cracking it.

Candidates are evaluated holistically — aptitude, coding depth, project understanding, and communication all play a role in final role allocation.

NQT Structure

- **Foundation Section** — 75 mins: Numerical Ability, Verbal Ability, Reasoning Ability (mandatory for all roles)
- **Advanced Section** — 115 mins: Advanced Quant, Reasoning, and Advanced Coding (mandatory for Digital & Prime)

Interview Focus Areas

- **Technical Depth:** Core CS subjects and live coding
- **Project Understanding:** Your contribution and tech stack
- **Communication:** Clarity of thought and soft skills

Technical Stack to Master

TCS evaluates candidates on a **fundamentals-heavy** model. While the company works across diverse technologies, your preparation should be anchored in core CS concepts and deep proficiency in at least one programming language.

Programming Languages

Master at least one language deeply — **Java, Python, or C++**. Focus on syntax, implementation, and avoiding runtime errors in coding questions.

Modern Tools

Emerging preference for candidates familiar with **AI tools, cloud basics**, and automation frameworks — aligned with TCS's AI-led delivery pivot.

Core CS Concepts

OOPs, DSA, DBMS, Operating Systems, and Computer Networking form the backbone of technical interviews. These are non-negotiable.

Data Structures & Algorithms

Arrays, Linked Lists, Stacks, Queues, Trees, Sorting, and Searching are high-frequency topics in NQT Advanced Coding and technical interviews.

Eligibility Criteria — B.Tech 2026 Batch

Before you begin preparation, ensure you meet TCS's eligibility requirements. These criteria are strictly enforced during document verification stages.

Academic Cutoff

Minimum **60% or 6.0 CGPA** throughout 10th, 12th, and Graduation. Consistency across all stages matters.

Eligible Branches

All engineering streams (B.E./B.Tech) are eligible to apply through the NQT route — no branch restrictions.

Backlogs Policy

Some drives allow **1 active backlog** at test time, but the safest rule is **zero pending backlogs** at final selection.

Package Range (UG Freshers)

Ninja

~₹3.40 LPA

Digital

₹7.09 – 7.30 LPA

Prime

₹9.09 – 9.30 LPA

 Role allocation depends on your NQT performance — aim for the Advanced Section to unlock Digital & Prime.

What's New at TCS — 2025–26

TCS is undergoing a significant strategic transformation. Understanding these shifts will help you tailor your preparation and stand out in interviews.

Massive Hiring Plans

TCS plans to hire **~40,000 trainees** in 2025, with similar or larger targets for 2026. ~25,000 campus offers already issued in India.

AI in Interviews

Interviews now frequently include questions on **how candidates would use AI** to improve productivity or solve problems efficiently.

1

2

3

4

AI-Led Realignment

Company realigned toward an **AI-driven operating model**. ~12,000 layoffs in FY26 (mid-to-senior levels), but campus hiring remained strong.

Fundamentals-First

Despite AI focus, TCS rewards **strong core CS knowledge** and aptitude. The hiring approach remains fundamentals-heavy.

Interview Tip: Prepare a thoughtful answer on how you'd use AI tools (like Copilot, ChatGPT, or automation scripts) to enhance software delivery efficiency.

5 Prep Tips to Crack TCS NQT

Consistent, structured preparation is the difference between clearing NQT and falling short. Follow these five strategies to maximize your score.

1 Daily Aptitude Routine — 45 Minutes

Dedicate 15 mins each to Quant, Reasoning, and Verbal daily. TCS tests are **speed-sensitive** and reward accuracy over random guessing.

2 Focus on High-Frequency Topics

Quant: Percentages, Ratios, Profit & Loss, Time & Work. **Reasoning:** Seating Arrangements, Syllogisms, Blood Relations. **Verbal:** Reading Comprehension, Sentence Correction.

3 Deep Language Mastery

Don't learn multiple languages superficially. **Master one language** (Java/Python/C++) — syntax, edge cases, and implementation — to avoid runtime errors.

4 Mock Test Analysis

Complete **5–6 full-length mocks**. Spend equal time analyzing where you lost time or missed questions. Poor time management is the #1 cause of NQT failure.

5 Project & Intro Readiness

Rehearse a **2-minute self-introduction** highlighting skills and projects. Be ready to explain your project's problem statement, tech stack, contribution, and outcome.

Start Preparing This Week

Your TCS Offer Begins Today

You now have everything you need — the process, the eligibility, the technical stack, and the prep strategy. The only variable left is **your commitment**. TCS is hiring ~40,000 freshers. Make sure you're one of them.

✓ This Week

Register for NQT, set up your daily 45-min aptitude routine, and pick your primary programming language.

This Month

Complete 3 full-length mock tests, revise core CS subjects (OOPs, DSA, DBMS), and finalize your project presentation.

By Placement Season

Be NQT-ready, interview-confident, and positioned for a Prime or Digital role offer.

"TCS tests are speed-sensitive and reward accuracy over random guessing." — TCS Recruitment Guidelines 2025–26

✓  **Your Action Plan:** Spend 45 minutes today on aptitude practice. Consistency beats cramming — start now, stay consistent, and your TCS offer will follow.
